SORAMITSU 2016-2025 ソラミツ

November 2025

A Memo to the SORA Community

This document accompanies the invoice sent to SORA for the services provided by SORAMITSU.

November 2025 was an incredible month of accomplishments. The SORA Integrated Plan remains the roadmap for SORA network development, and progress has been steadily advancing.

This memo provides an overview of activities for each track, a description of the development activities specific to this month, and the total number of hours dedicated to the SORA community, as presented in invoice number 900138.

1 SORA (Substrate) – 749 hrs

This month's work focuses on SORA v2 maintenance, specifically testing a runtime update for the mainnet and parachains and developing SORA v3 (Nexus).

Blockchain

The team continues to maintain and update the **SORA wiki**, ensuring that the implementation details, long-term roadmap, and overarching vision of the SORA ecosystem remain clearly documented. The latest sections added include information on SORA Nexus and the whitepaper. This ongoing effort helps maintain alignment across teams and provides contributors with an authoritative and accessible source of truth.

Alongside documentation, the team conducts continuous **data analysis of the network and broader ecosystem**, using insights from activity patterns, user behaviour, and system performance to support data-driven decision-making across development and strategy.

Regular **meetings, brainstorming sessions, and planning discussions** are held with builders and ecosystem partners to support the development of new projects on SORA and the upcoming **SORA Nexus (SORA v3)**. These collaborative exchanges help identify integration opportunities, refine technical requirements, and strengthen the foundation for future applications.

Significant progress has been made on next-generation infrastructure: **SORA v3 (Nexus)** and the **Iroha 3 repository** are now complete, though currently private. The SORA Nexus whitepaper is now available on the SORA Wiki, offering insight into the network's architecture, new features and the direction of its evolution.

In addition, **Hubchain Phase 2** has been completed, and several conceptual features from that work are now strong candidates for implementation in SORA Nexus.

SORA Nexus work has made tremendous progress, with work ongoing on updates to make the blockchain infrastructure more **ISO-20022-native, safer, and easier to integrate**, as well as preparing tooling for developers to take full advantage of the network.

Through the ongoing work, application developers will be able to generate and submit standardised payment messages (pacs.008/009) directly from the JS SDK with built-in validation, while data-availability flows and proofs will be fully supported end-to-end without custom plumbing.

At the infrastructure layer, Torii and the CLI will strictly enforce financial reference data and crosswalks, ensuring only well-formed, compliant settlement instructions enter the ledger. Together with improved gateway tracking and automated reference-data linting, this will strengthen SORA Nexus's role as a **reliable settlement and interoperability layer between traditional financial systems and on-chain workflows**.

On the blockchain side, work is also in progress on the **SORA Kusama Parachain update**, which includes **Asset Hub compatibility** and a broader **Substrate upgrade**. The release is undergoing testing to enable a seamless transition to the Kusama asset hub, including opening an HRMP channel and migrating funds.

In parallel, similar efforts are underway for the **SORA Polkadot Parachain update**, ensuring parity between networks through Asset Hub compatibility and Substrate modernization.

1.1 SORA Backend

- SORA Kusama Parachain Update in Progress:
  - Asset Hub compatibility
  - Substrate Upgrade
  - Testing ongoing

- SORA Polkadot Parachain Update in Progress:
  - Asset Hub Compatibility
  - Substrate upgrade

- SORA Nexus:
  - Javascript implementation:
    - Added ISO 20022 pacs.008 submit/status helpers and a matching recipe, letting JS callers exercise the Torii ISO bridge without bespoke HTTP plumbing.
    - Added pacs.008/pacs.009 builder helpers plus a config-driven recipe so JS callers can synthesise ISO 20022 payloads with validated BIC/IBAN metadata before hitting the bridge.
    - Completed the DA ingest/fetch/prove loop.
    - sorafsGatewayFetch scoreboard metadata now records the gateway manifest id/CID whenever gateway providers are used so adoption artefacts align with the CLI captures.

  - Torii CLI:
    - Enforce ISO crosswalks: Torii now rejects pacs.008 submissions with unknown agent BICs and the DvP CLI preview validates --delivery-instrument-id via --iso-reference-crosswalk.
    - Add PvP cash ingestion via POST.

  - SORA Nexus tooling:
    - Added cargo xtask iso-bridge-lint (plus ci/check_iso_reference_data.sh) to validate ISIN/CUSIP, BIC↔LEI, and MIC snapshots alongside repository fixtures.

  - Preparation to make the repo public.

- Others:
  - Codebase routine maintenance and fixing;

- Project management activities (daily meetings, planning, retrospectives);
- Quality assurance and testing activities, as well as automated testing development;
- Data analysis of the network and ecosystem to drive data-driven decision-making;
- Meeting, brainstorming and planning with builders' partners for implementing projects on SORA;
- Building, strategizing, and planning for SORA v3.

2 Education – 158 hr

Educational operations this month included:

2.1 SORA

- Social media management;
- Alignment and coordination for business-oriented initiatives;
- Ongoing SORA wiki maintenance and feature documentation covering new releases for users and builders;
- Cross-team, cross-department synchronization and planning on processes;
- Product-education collaboration on campaigns;
- Data analysis of the network and ecosystem to drive data-driven decision-making;
- Meeting and brainstorming with builders partners for implementing projects on SORA and SORA Nexus;
- Brainstorming, strategising, and planning for SORA Nexus;
- SORA Nexus content production.

- Expenses of attending high-impact in-person events and business-to-government (B2G) meetings.

3 Total Hours – 907 hr

Additionally, invoice 900137, attached, pertains to cloud server costs for November 2025.

Your ongoing support is greatly appreciated. We look forward to continuing to serve you.

Sincerely,

SORAMITSU Helvetia AG
